

Company capability

Overhead line projects and consultancy

Transpole Services Ltd provides project development, commercial and tender services, project management and delivery across 33–400 kV wood pole and tower networks. We work with utilities, principal contractors and developers on individual assignments, defined work packages and complete projects.

01 Development and consultancy

Practical input to project scope, delivery strategy, programme and technical and commercial requirements. Outputs include defined work packages, delivery plans and coordinated action schedules to move projects towards procurement and construction.

02 Commercial and tender services

Tender review and bid planning, scope development, estimating and pricing, and coordinated technical and commercial submissions. Deliverables include requirements checklists, clarification schedules, cost build-ups, pricing schedules, methodologies and tender programmes.

Procurement support covers subcontract enquiries, specialist sourcing, quotation comparisons and recommendations. Tender handovers capture scope, budget, assumptions, exclusions and commitments. Commercial management includes valuations and payment applications, variations and change control, and preparation and agreement of final accounts.

03 Project management

Planning and mobilisation: establish the scope, programme, milestones and responsibilities; coordinate resources, procurement, access and design inputs around site constraints.

Delivery and controls: manage project and site activities, specialist subcontractors and interfaces between overhead line works, civils and enabling activities. Track programme, costs and progress; manage risks, issues and changes; and provide clear reporting, forecasts and actions for the client.

Completion and handover: plan completion requirements, coordinate outstanding works and assemble handover records. Track close-out actions through client acceptance and coordinate commercial close-out.

Our focus is successful delivery: on time, on budget, and protecting our clients' reputation and our own through safe working, quality and reliable performance.

Delivery and supporting services

04 Project delivery

Delivery and management of defined overhead line work packages, with planning, mobilisation, site coordination and progress reporting. Responsibilities, specifications, programme and completion requirements are established for each appointment.

Civil engineering works and access and enabling works can be delivered alongside overhead line services or as separate packages. These include temporary access routes, working areas and vegetation clearance, with specialist subcontractors coordinated around the programme, site conditions and environmental requirements.

Turnkey as an appointment option

Where a complete package is required, Transpole offers full turnkey development and delivery for the agreed scope. We manage development, procurement, construction, completion and handover, coordinating design inputs and specialist subcontractors. Scope, approvals, responsibilities and acceptance requirements are agreed at the outset.

Surveys and reporting

Drone progress surveys provide aerial imagery and visual records of agreed areas and stages of work. Asset inspection reporting records observations, supporting evidence and matters requiring follow-up against an agreed brief.

Land access and environmental coordination

Land-access arrangements, stakeholder liaison and coordination with environmental specialists. Access requirements, constraints, survey inputs and agreed actions are incorporated into the delivery programme.

Successful delivery

On time: establish realistic milestones, track progress and act early on delays. On budget: agree the cost baseline, monitor expenditure and manage change. Reputation: deliver safely and to the agreed quality, communicate reliably and complete the handover properly.

Discuss your project or tender

Appoint Transpole for development advice, commercial and tender services, project management, a defined works package or a turnkey project. Share the scope, location, programme or tender deadline and known constraints so we can establish the right appointment.
